# OBSERVATORIO MUNDIAL DE DONACIÓN Y TRASPLANTE (GODT)

www.transplant-observatory.org

# Objetivos específicos

- Ser una fuente de información a nivel mundial de diversos aspectos relacionados con la donación y el trasplante de órganos, células y tejidos, dirigido a profesionales y público en general.

- Ofrecer una herramienta de trabajo, intercambio de información y de referencia para los profesionales implicados, promoviendo la cooperación internacional a través de la web.

- Facilitar el establecimiento de una red de contactos clave en el ámbito de los trasplantes, entre representantes de las Autoridades Sanitarias de los Estados Miembros de la OMS.

- Recoger, analizar y difundir la información sobre aspectos legislativos y organizativos relacionados con los trasplantes así como datos anuales de actividad trasplantadora a través del Registro Mundial de Trasplantes.

## About Us

**ABOUT WHO (www.who.int)**

**The World Health Organization is the United Nations specialized agency for health. It was established on 7 April 1948. WHO's objective, as set out in its Constitution, is the attainment by all peoples of the highest possible level of health. Health is defined in WHO's Constitution as a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity.**

**WHO is governed by 193 Member States through the World Health Assembly. The Health Assembly is composed of representatives from WHO's Member States. The main tasks of the World Health Assembly are to approve the WHO programme and the budget for the following biennium and to decide major policy questions.**

**WHO AND TRANSPLANTATION ( www.who.int/transplantation)**

**Following Resolution WHA57.18. of the World health Assembly in May 2004, transplantation became an area of work at WHO. The mission of WHO on transplantation is carried out by the Clinical Procedure unit in the Department of Essential Health Technologies (EHT/CPR). The Clinical Procedures unit is responsible for promoting the ethics of donation and transplantation and the appropriate effective and safe use of cells, tissues and organs for transplantation.**
**The mission of WHO in the area of transplantation is to meet the requirements of the fifty-seventh World health Assembly Resolution WHA57.18.**
**Objectives can be summarized as follows:**

1. **To work with Member States and to provide assistance at their request to ensure effective national oversight of allogeneic and xenogeneic transplantation activities. This would ensure accountability, traceability and appropriate surveillance of adverse events (in particular transmission of infectious agents of xenogeneic origin).**
2. **To increase access of citizens to safe and effective transplantation of cells, tissues and organs. Additionally, to ensure ethical and technical practices from procurement of human material for transplantation to the follow up of recipients and live donors.**
3. **To promote international cooperation to encourage the global harmonization of technical and ethical practices in transplantation. This would include the prevention of exploitation of the disadvantaged through transplant tourism and the sale of human material for transplantation.**
4. **To encourage donation of human material for transplantation.**

**To carry out the objectives of Resolution WHA57.18, WHO has developed the Global Knowledge base on Transplantation (GKT), tool that is being elaborated over time as information becomes available and networks are established. Its primary role is to provide access to comprehensive information on transplantation to all who are interested for lay or professional reasons.**
**The GKT has four components that are being developed:**

- **GKT1 activities and practices in allogeneic donation and transplantation: number of donations and transplantations carried out globally, access and outcomes of transplantations.**
- **GKT2 legal framework and organizational structures for allogeneic transplantation.**
- **GKT3 threats and responses, reference information and vigilance and surveillance of risks to safety and ethics in transplantation.**
- **GKT4 xenotransplantation.**

# Current concerns in transplantation

**Luc Noël** [a]

As long as the global supply of tissues, cells and organs for transplant does not meet needs, desperate patients are easy prey for unscrupulous individuals. Yet countries including Spain and the United States of America have shown that it is possible to make progress towards self sufficiency in transplants by meeting these needs with altruistic donations. Achieving national self-sufficiency is not easy. It requires a level of commitment from society that very few countries have been able to garner, but building this commitment arguably costs much less in the long term than relying on the payment of "volunteers"– inevitably the poor and vulnerable.

In contrast to organs, most human tissues and cells destined for transplantation can be processed, preserved and stored, often for long periods. Their transportation can be very easy and shipping across national boundaries is sometimes necessary to best meet patients' needs. Risks of ethical breaches arise at all stages; from consent to donation through to the allocation of transplants, and the clinical care of donors and receipients. Recent cases of cadaveric tissue theft have shown how unethical behaviour in tissue procurement bypasses the safety barriers designed to decrease the risk of transmitting infectious diseases to receipents.[1,2] The international circulation of human cells and tissues may also be an opportunity for hefty profit. Those who wish to profit from this trade do so by taking advantage of both poor people and their need for income, and of wealthy patients' needs and their ability to pay.

The international organ trade is widely referred to as "transplant tourism". This entails cross-border travel by any participant in transplantation (recipients and/or surgeons and/or live donors) for the purpose of obtaining an organ in exchange for cash or goods. The profit motive predominates in this trade, more than the interest of the patients, and care for the live organ donor is secondary or non-existent.

This issue of the Bulletin contains two papers on transplantation: the first is dedicated to the ethical aspects of cell and tissue transplantation,[3] the second is an attempt to produce a picture of the international organ trade.[4]

Both papers are outputs of WHO's consultation process in response to Resolution 57.18 of the 2004 World Health Assembly on updating the 1991 Guiding Principles for Human Organ Transplantation. Resolution 57.18 requested WHO's Director-General to collect global data on all aspects of transplantation – including ethical issues. With the support of the Spanish government, WHO has contributed to a global knowledge base on transplantation designed to document the global situation of legitimate transplantation from official sources in most Member States.[5]

lo tienes

lo necesitas

Tu corazón no entiende de culturas o colores,
el resto de ti tampoco.

¿Qué puedes hacer?

Habla con tus familiares y amigos sobre la donación. Conoce lo que ellos piensan y exprésales tu decisión.
Cualquier persona podría salvarte la vida. ¿No harías tú lo mismo?

¿Sabías que...?

Las decisiones importantes se toman en familia.
Una gran decisión es Donar tus órganos.
Tras la muerte puedes mantener viva la esperanza de otros.
Alienta tu conciencia individual y hazte donante.

Organización Nacional de Trasplantes

Tel. 24h : 902 300 224

www.ont.es

Castellano / English

Cualquiera de ellos podría salvarte la vida.
¿No harías tú lo mismo?

Anyone of them could save your life.
Wouldn't you do the same?

Donación sin Fronteras | ONT

DONACIÓN SIN FRONTERAS | Castellano | DONATION WITHOUT FRONTIERS | English

## Aspectos Organizativos

•Existencia de una institución responsable de la coordinación de las actividades de donación y trasplante de órganos, células y tejidos, actividades que desempeña, financiación y dependencia institucional.
•Existencia de comités técnicos y éticos relacionados con la donación y el trasplante.
•Sistemas de biovigilancia y seguimiento de receptores para la detección de reacciones adversas relacionadas con el trasplante.
•Registros de actividad de donación y trasplantes.
•Existencia de estándares o instrucciones escritas para los trasplantes tanto de donante cadáver como de vivo.
•Programas de formación para el personal involucrado en la donación y el trasplante.

## Aspectos Legislativos

•Existencia de leyes específicas para la actividad de donación y trasplante.
•Papel que desempeñan las Autoridades Sanitarias Nacionales en la regulación y supervisión de las actividades de trasplante incluyendo la autorización, acreditación y licencia de centros para llevar a cabo los trasplantes.
•Requerimientos legales para la calidad, eficacia y seguridad de los procedimientos.
•Consentimiento necesario para la donación, en caso de donante fallecido y de vivo.
•Requisitos legales para la donación de vivo.
•Existencia de prohibición para la obtención de beneficios por la donación de órganos, células o tejidos para trasplante.
•Especificaciones o criterios de distribución.
•Inclusión de requisitos de confidencialidad y trazabilidad en la legislación.
•Importación y exportación de órganos, células y tejidos regulada por ley.

## Datos de Actividad

•Centros trasplantadores para cada órgano.
•Actividad de donación.
•Actividad de trasplantes de órganos (renal, hepático, cardíaco, pulmonar, pancreático, intestinal, multivisceral).
•Actividad de donación y trasplante de células y tejidos.

## Uses of Data

rvatory of Donation and Transplantation aims to cover some of the aspects drawn up by the WHA 57.18 is resolution it was requested to collect global data on the practices, safety, quality, efficacy and transplantations and their global availability for all those concerned, which is recognized as a global improvement of and better access to transplantations.

rvatory of Donation and Transplantation provides a useful tool to professionals, patients, politicians and access to global information and data regarding donation and transplantation activities in countries within WHO. Specifically, the observatory provides information for each country on the organizational and legal framework that supports organ, cells and tissue donation and transplantation. It also gives an overview of the donation and transplantation activities within the different countries and related to the different types of organs, cells and human tissues.

Data have been provided by the different WHO countries, through a specifically designed questionnaire, that will be updated as changes in legal and organisational issues on transplantation occur within the different countries and with the new annual donation and transplantation activities.

Some of the possibilities to use these data are described bellow:

- Transplant professionals will be able to understand the differences within countries identifying opportunities for improvement from their scientific and clinical perspective.
- Politicians may be able to identify legal and organizational needs within their country with regards to donation and transplantation.
- The general public may gain a greater understanding of the transplant system's achievements, as well as its continuous challenge to meet the needs of patients awaiting transplantation.

STATISTICS
Total population: 44,108,530
GDP per capita (Intl $,2004): 24,325
Life expectancy at birth m/f (years): 77.0/83.0
Healthy life expectancy at birth m/f (years, 2002): 69.9/75.3
Child mortality m/f (per 1000): 5/4
Adult mortality m/f (per 1000): 113/45
Total health expenditure per capita (Intl $, 2003): 1,853
Total health expenditure as % of GDP (2003): 7.7
LEGISLATION
The transplant law and the royal decrees are approved in the parliament. The law regulates all the activities related to donation, organ removal from a donor, transport, conservation, allocation, transplant and follow up of the transplant. It also guarantees equity in the process (traceability) and forbids any kind of trade of profit...

## Registries - Heart/Lung Registries > Slides

The ISHLT International Registry for Heart and Lung Transplantation was established to provide on-going up-to-date information on the thoracic organ transplant experience around the world. This Registry is the only one of its kind. Every country performing on-going heart and lung transplantation is invited to contribute their data for inclusion in the Registry. Collected statistical information includes outcome data, survival data, and risk factor data segregated into subgroups according to various demographic criteria as well as the type of transplant (heart/heart-lung/lung). Slides depicting the collected data are produced each year and may be used by you in presentations, reports, studies, etc.

We are pleased to provide the Registry data graphs and charts on the ISHLT web site free of charge as a Power Point file. This enables you to use the data in electronic computer presentations and also enables you have hard copy slides made of only those Registry data graphs and charts that you are interested in. You will have to have a copy of the Power Point software on your system in order to use the file. Double clicking on any slide when open in Power Point will display the slide's data table.

This year's slides have been divided into six separate sets, listed below. You can download whichever sets are of interest to you.

Introduction/General Statistics ▸

Overall Heart and Adult Heart Transplantation Statistics ▸

Overall Lung and Adult Lung Transplantation Statistics ▸

Pediatric Heart Transplantation Statistics ▸

Pediatric Lung Transplantation Statistics ▸

All Heart/Lung Transplantation Statistics ▸

Right click on PowerPoint File of your choice and choose "Save Target As..." to download to your computer. Save the file in the directory of your choice. Open using Microsoft PowerPoint Software.

# CONCLUSIONES

- **Servir de fuente de información en todo lo relacionado con trasplantes tanto para el público general como profesionales.**

- **Ser una herramienta de trabajo y de intercambio de información para los profesionales del área de trasplantes y grupos de trabajo establecidos.**

- **Su diseño y puesta en marcha han requerido:**

  - **Colaboración estrecha entre la ONT y la OMS.**
  - **Establecimiento de una red de personas clave.**
  - **Adopción de las medidas necesarias para incrementar la información disponible y mejorar la calidad de las respuestas y por tanto la calidad de los datos.**

# ¡Muchas gracias!
